

Agenda of Client Meeting

Team 8

Friday 24th April 2017

Time and Place

The fifth client meeting for the MCI Project was held in Ingkarni Wardli 4.48 at 3pm on Monday.

Present

1. Hangyue Xu
2. I-Sheng Chris Wang

Client: Christoph Treude

Apologies

None

Meeting Procedures

1. Progress about the project
 - a) Getting Started on Heroku with Python
 - b) Learned how to differentiate the localhost and soft-launch deployment.
 - c) Set up a lot of third-party application locally.
 - d) It is a long installation and hardly to start.
2. Problem encountered – Some third-parties application only for the specific version of Python.
3. Like we are currently using Python 2.3.6 and Python 3.4.3, but like “flask”, “Django” application may need specific platform run compile only can run it successfully.
4. Postgres is something related to database which can deploy from local to soft-launch. Our project does not require any database storage so far.
5. Establish Heroku locally and running through the terminal/bash. Repository is important.
6. Found another web-application deployment model which is DigitalOcean. We have obtained some promotion code to create our own web-application deployment model. It can run on the clients' PC with just sharing the IP address. After every time finished testing, we will commit the code to our public GitHub account and start run it locally.
7. We have used the platform of Amazon to deploy our source code so far. It has not finalised yet as there is a restriction on the time limitation when deployed every time.

8. Demonstration of extracting section heading, Aggregate the section heading and sort out how many GitHub project with no README file or besides the format of README.md.

Other Issues

- Do we need to purchase a brand-new domain? Or as long as the client can access to our website then should be good enough?
- Extracting the repeatable URL and picture's URL are still under-going.

Next Meeting

Proposing 4th May, Thursday at 3pm.
