

Agenda of Client Meeting

Team 8

Friday 31st March 2017

Time and Place

The second client meeting for the MCI Project was held in Ingkarni Wardli 4.48 at 1.30pm on Friday.

Present

1. Hangyue Xu
2. I-Sheng Chris Wang

Client: Christoph Treude

Apologies

None

Meeting Procedures

1. Presentation of first milestones prototyping
 - Simple user interface of the web application
 - Function of the randomly selected project ID from GitHub
 - Able to fetch GitHub project ID
 - Able to differentiate the clickables and non-clickables URLs of README files
 - Calculate the aggregated URLs from the selected README files
 - Calculate the aggregated pictures/images from the selected README files
2. Discussion of the following features to be accomplished
 - Able to extract the section titles.
 - Analyse which project that do not consist of README file with .md file format.

Other Issues

1. Summary list of the aggregated information
Do we need to consolidate all the section titles into a table and calculate how many README files using the corresponding titles, or do we need to present every README file's section titles into the stand-alone table?

2. For the first milestone prototyping, we have linked directly to the GitHub API, once we have clicked the “click” button, it will link to the GitHub API and randomly select the number of projects and present in the aggregated form. The problem is it will be very slow. Do we required to download the randomly selected project on the local PC first and only perform the second step of analysing the content of the README?
3. Is that all the clickable links will be counted in? Do we need to ignore the same URLs?
4. Any testing tool required?
5. The content to be delivered for the final documentation. Does it required to illustrate all the framework and architecture of this project?

Next Meeting

To be confirmed.
